

Myrtle Rust Word Search

Myrtle Rust is a fungus causing disease in some native plants, including Bottlebrush, Tea-trees, Lillipillies, and eucalypts (gum trees).

An information hub was developed by the Australian Network for Plant Conservation and we encourage our community to be aware of this fungus and report any sightings.

See our information page to find out what Myrtle Rust looks like:
<http://www.anpc.asn.au/myrtle-rust>

If you live in Victoria, Tasmania, South Australia, Western Australia, or the Northern Territory, and you think you have found Myrtle Rust on a plant, get Mum or Dad to report it to the National Exotic Plant Pest Hotline: 1800 084 881

SKILL LEVEL: Intermediate
